

Project Name: BeatsByDavid

Team Members: Johnson Cheung, Albert Deng, Alexander Ho, Jot Kaur, David Kopala, Jon Oulton

Description: Our app intendeds to help CU students find the optimal study place. By recording historical data, and providing live data of loudness, and temperature, our app will allow CU students to find the optimal study area, as well as plan ahead by predictions provided by our historical data.

Setup: Enter beats.davidkopala.com in any browser url.

Usage: By mousing over each section, the current temperature and decibel level will appear.

We're here to help you find a peaceful and productive place to study. Don't deal with loud and overly hot areas of the Engineering Center again. **Click the points to expand them.**
